Residency Training Program in Veterinary Anatomic Pathology

Program Overview and Caseload Diversity

The School of Veterinary Medicine (SVM), Department of Pathobiological Sciences, at the University of Wisconsin-Madison (UWM) offers a 3-year resident-training program for graduate veterinarians in anatomic pathology. The goal of this program is to provide diverse learning opportunities to prepare individuals for a career in veterinary pathology and complete the requirements for certification by the American College of Veterinary Pathologists (ACVP).

Residents have access to a highly diverse necropsy and biopsy diagnostic caseload from UWM Veterinary Medical Teaching Hospital, Milwaukee County Zoo, Henry Villas Zoo, International Crane Foundation, Wisconsin Department of Natural Resources, and specialty clinics, with a significant emphasis in zoo and exotic animal submissions. Required service rotations through the UW RARC Comparative Pathology Laboratory also promotes exposure to laboratory animal pathology.
Residents are also exposed to a high number of ophthalmology specimens and receive mentorship from Comparative Ocular Pathology Laboratory of Wisconsin (COPLOW) pathologists during case evaluations. The sharing of necropsy facilities with the Wisconsin Veterinary Diagnostic Laboratory (WVDL) allows WVDL-based case material to be shared with residents on the necropsy floor or more formally through coursework or rounds. Finally, residents can further broaden their caseload exposure and training experience through externships at local laboratories or institutions, such as WVDL, Labcorp (formerly Covance), National Wildlife Health Center, and Wisconsin National Primate Research Center, to name a few.

Training Focus

At the core of the residency program is the mentorship from pathologists during case assessments, the active participation in a wide array of seminars and rounds, and the progression towards independence during the third year of residency with limited pathologist oversight. This program offers a wealth of rounds and seminars, such as weekly Biopsy rounds, Gross Seminar, and Histopathology Seminar, in addition to monthly rounds held jointly with other services including Dermatopathology, Oncology-Pathology, Special Species-Pathology, and Neuropathology rounds. Residents are also encouraged to engage in COPLOW-led ocular pathology rounds, radiology/pathology rounds, and cytology rounds, in addition to departmental research seminars and grand rounds. To engage with pathologists beyond the SVM, residents also attend monthly “Pathologists’ Night Out” comparative pathology rounds co-hosted by
veterinary and human anatomic pathologists from across the Madison area.

In addition to preparatory rounds, residents engage in faculty-assisted Journal Club and Phase I Study Group, as well as yearly Mock Phase I and Phase II ACVP examinations. Finally, as an adjunct to their core training, residents are also encouraged to take a lead role in the instruction of second year veterinary students in laboratory and lecture sessions of pathology courses run by our department, as well as fourth year veterinary students in the anatomic pathology rotation.

Faculty Mentors

David Gasper, DVM, PhD
Clinical Assistant Professor; Diplomate, ACVP (anatomic pathology)
Diagnostic pathology; zoo & wildlife diseases; wildlife conservation; comparative immunology; immunology of infectious disease

LaTasha K. Crawford, VMD, PhD
Assistant Professor; Diplomate, ACVP (anatomic pathology)
Diagnostic and comparative pathology; neuropathology; bladder disease and visceral pain; molecular mechanisms of pain and peripheral neuropathies;

Lorelei L. Clarke, DVM, PhD
Clinical Assistant Professor; Diplomate, ACVP (anatomic pathology)
Diagnostic pathology; wildlife and population health; infectious disease; ruminant pathology

Kimberley Sebastian, BVSc, MS
Clinical Assistant Professor; Diplomate, ACVP (clinical and anatomic pathology)
Diagnostic pathology; hemolymphatic disease and diagnostic neuropathology; pedagogy

**Application for Admission**

Applicants must possess the DVM/VMD or equivalent degree and be eligible for Wisconsin licensure. Applications consist of a (1) letter of intent, (2) curriculum vitae submitted by the candidate as well as (3) three letters of recommendation submitted by the referring individuals. Applications are due **October 1st** for positions starting July 1st of the following year. Application materials **from the candidate** and letters of reference **from referees** can be emailed to:

pbs-admin@vetmed.wisc.edu

Please direct your questions regarding our Anatomic Pathology Residency program to the residency coordinator, Dr. David Gasper:
